

For Sale now: The Technical Manuals regarding the Semi-Precast Concrete Components “Double Wall” and “Floor Slab” in English Language

More than ten years ago the Syspro Group started with the publication of their first edition of technical manuals.

The Syspro Group is a co-operation of Middle European companies with long-time experience in that technology. A big benefit of the co-operation was the concentration into common projects of R&D. This fact made them to the leading provider of these components. Advanced applications and patented developments are the results of these pioneer works and made this technology fit for spreading world wide.

A very important fact for the success of the use and high share of these types of precast members in the construction market was the publication of the technical manuals.

The introduction and spreading of a product is highly dependent of its acceptance by the users. Architects, structural and civil engineers, contractors and property owners have to be convinced. At least they will have a product that does not restrict the architectural design, allow easy handling during the construction process and save costs for the final owner of properties. All demands were helpful supported with the publication of these manuals.

The producers and suppliers of the precast concrete components handed over the books to all relevant persons. They could find easy explanations for their requirements and applications. The content of the books gives answers for all situations around the technology. This was one of the most important premises for the high acceptance of this technology in Middle Europe today.

Prilhofer Consulting and its “Precast Service” is a partner for development and re-engineering of precast concrete plants in different regions of the world. The scope of services is widely scaled. The recommendation and adaptation of suitable building systems is one of the main tasks. Hereby the same problems occur like before in Middle Europe. There are no acceptable technical documentations to order world-wide with a clear and significant description of the system. This gap brought CPC into the situation to ask the Syspro Group to become the authorization to translate the manuals to English language and their sale and marketing.

The Technology behind the Wall

How is it done?

Syspro[®]PART
Die tragende Qualitätswand

The Technology behind the Floor

How is it done?

Syspro[®]TEC
Die bewährte Qualitätssdecke

Today we can announce that the manuals are finished. Two volumes, "The Technology behind the Wall" and "The Technology behind the Floor", are available now.

The content is an equal translation to the German issue. The user gets all information about the basic knowledge for design, assembling and economical criteria like:

- Detailed description to the product
- Codes, approvals, regulations
- Structural analysis and design
- Reinforcement and design details
- Fixtures and embeds
- Recommendations for using the system
- Measures against fire, water, sound etc.
- Quality requirements
- Site transport and assembling
- Commercial aspects

It is a handbook for users like architects, engineers and managers who will be introduced into this technology. Engineers can learn easily rules and regulations for structural analysis and design. At all a valued present for users of these building components to customers and other people to convince.

Sales price is € 39.50 for each volume (net plus additional dispatch charge).
