For Sale now: Technical manuals covering semi-precast concrete components "Double Wall" and "Floor Slab" in English

More than ten years ago the Syspro Group started with the publication of their first edition of technical manuals.

The Syspro Group is a co-operation of Middle European companies with much experience in such technologies. An advantage of the co-operation

was the concentration into common projects of R&D. This made them the leading provider of these components. Advanced applications and patented developments are the results of their pioneer works making them technologically advanced for spreading world wide.

Very important for the success of the use and demand of these types of precast members in the construction market was the publication of the technical manuals. The introduction and demand of a product is highly dependent on its acceptance by the users. Architects, structural and civil engineers, contractors and property owners have to be convinced. They require a product that does not restrict the architectural design, allow easy handling during the construction process and save costs for the final owner of properties. All these demands were supported with the publication of these manuals.

The producers and suppliers of the precast concrete components handed over manuals to all relevant persons. These manuals are equipped with easy explanations for their requirements and applications. The contents of these manuals also provide answers for all situations around the technology. This was one of the most important reasons for the high acceptance of this technology in Middle Europe today.

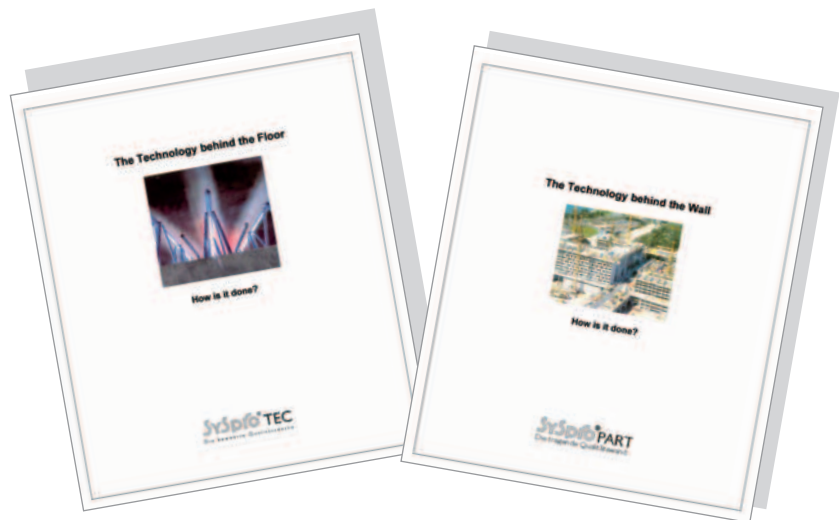

Christian Prilhofer Consulting (CPC) and its "Precast Service" is a partner for development and re-engineering of precast concrete plants in different regions of the world. The scope of services is widely scaled. The recommendation and adaptation of suitable building systems is one of the main tasks. Similar problems to previous times occur in Middle Europe. There are no acceptable technical documentations world-wide with clear and significant descriptions of the systems. This gap in the market initiated CPC to request the Syspro

Group to become the authority to translate the manuals into the English language and to handle their sales and marketing. The manuals, now complete, are available in the form of two volumes, "The Technology behind the Wall" and "The Technology behind the Floor".

The content is a translation of the German issue. The user obtains all relevant information about basic design, assembly and economical criteria, for example:

It is a handbook for users like architects, engineers and managers who will be introduced into this technology. Engineers can learn with ease, rules and regulations for structural analysis and design. Valued information for users of these building components and customers alike.

Sales price is € 39.50 for each volume (net plus additional dispatch charge). It can be ordered at the address given below.

- Detailed description of the product
- Codes, approvals, regulations
- Structural analysis and design
- Reinforcement and design details
- Fixtures and embeds
- Recommendations for using the system
- Measures against fire, water, sound etc.
- Quality requirements
- Site transport and assembling
- Commercial aspects
